About me

I came from Syria in 2014 with little to English. I have always wanted to gain knowledge and learn programming, I became a software engineer and graduated in 2022 with a 2:2 degree, doing that in 8 years of being in the country was tough and I feel proud of myself for doing it.

I got introduced to flutter by a friend of mine and I liked it a lot so I did a few projects with the framework including my university Dissertation and other projects after university. I am looking to find a job as a flutter developer to help me advance the knowledge I have learnt throughout the years and put them into practice to improve my programming and communication skills.

Education

University of Brighton Software engineer 2019-2022 Bsc(Hons)

Grade 2:2 second class Honours lower division

Modules included.

Web development   Database

Mobile development   Group project

Object Oriented Programming   Data Structure

I have learnt JavaScript, PHP and Linux but I did not go in depth with them after finishing my degree.
